## 01. Today

**Handy Shell** is a powerful replacement of standard Active Standby. It allows you to carry out most common everyday operations quick and handy.

**Today view** allows you to get information about your phone settings, ongoing calendar events, incoming calls, sms, e-mails, weather forecast, and provides with application shortcuts with the help of different Plugins. There are **5 types of Plugins**:

- Clock Plugin
- App Shortcuts Plugin
- Phone Indicators & Settings
- Calendar Plugin
- **Weather Plugin** (requires Handy Weather v.6 or higher to be installed).

All Plugins can be moved (along the screen), customized, activated/deactivated through **Settings view (Options > Settings > Plugins)**.

- ✍ Start typing to invoke **Dial or Start** view. This view searches through available applications to start or contacts to dial. If no applications or contacts meet search criteria, it **simultaneously** suggests you to dial corresponding number.

## 02. Applications

**Applications view** allows you to launch quickly 12 (3\*4) favorite applications. You can replace, move and delete corresponding **Shortcuts** through **Option > Shortcuts** submenu.

- ✍ Start typing to invoke **Dial or Start** view. This view searches through available applications to start or contacts to dial. If no applications or contacts meet search criteria, it **simultaneously** suggests you to dial corresponding number.

---

### 03. Contacts

---

**Contacts view** allows you to work with (call, send SMS) 12 (3\*4) favorite contacts. You can replace, move and delete corresponding **Shortcuts** through **Option > Shortcuts** submenu.

- ☞ Start typing to invoke **Dial or Start** view. This view searches through available applications to start or contacts to dial. If no applications or contacts meet search criteria, it **simultaneously** suggests you to dial corresponding number.

---

### 04. Settings

---

**Settings view** allows you to configure **Handy Shell** performance. You can customize plugins in **Plugins view**, set control keys (**Red key**, **Menu key**) behavior in **Keys view** and set default appearance of **Handy Shell** views in **Preferences view**.

---

### 05. Plugins

---

There are 5 types of Plugins available in Today view:

- **App Shortcuts Plugin** with shortcuts for your 6 favorite applications.
- **Clock Plugin** with Big digital clock, date, next alarm (with alarms hooked up from Clock, HandyAlarm or HandyClock) and alarm icon (dimmed or active).
- **Phone Indicators & Settings Plugin** allows you to quickly access Bluetooth switch, Log, Messaging, Profiles, Themes and displays always up to date information about incoming messages, e-mails and missed calls (in popup windows). You can use **<C>/Backspace** to deactivate popup and clear incoming message/call information.
- **Calendar Plugin** displays ongoing calendar events and launches Calendar or Handy Calendar subject to your settings.
- **Weather Plugin** displays 5-days weather forecast for your home city (requires Handy Weather v.6 or higher to be installed).

All Plugins can be moved (along the screen), customized, activated/deactivated.

---

### 06. Keys

---

**Handy Shell** allows you to set actions for **Red key** and **Menu key**. Go to **Options > Settings > Keys** to add or remove elements of **Red key** or **Menu key** cycles.

- **Menu key cycle** – set applications to be cycled when pressing Menu key.
- **Red key cycle** – set applications to be cycled when pressing Red key.
- **Red key action** – set action for the Red key.
- **Exceptions** – set applications, which should not be closed by the **Red key action** (if **Red key action** is **Close current app**)

---

## 07. Preferences

---

This option of **Settings view** allows you to configure application pages' cycle and set the time when **Handy Shell** should send started application(s) to the background.

- **Active pages** – set Handy Shell's views to be cycled when pressing Right soft key.
- **Appear after (mm:ss)** – set after what time Handy Shell should pops up to the foreground.
- **Exceptions** – set applications, which should not be overlapped by **Handy Shell** after **Appear after** time.

---

## 08. Dial or Start

---

**Dial or Start** view is invoked when you start typing while being in any of **Handy Shell** views. It searches through available applications to start or contacts to dial. If no applications or contacts meet search criteria, it **simultaneously** suggests you to dial corresponding number.

---

## 09. Registering

---

You can use this application during 14 days demo period. Then you will need to register. You can register on-line at our web site (go to Options > About).

After a purchase you will get your serial number by e-mail and a link for downloading the application. Serial number consists of 2 groups of 8 digits, e.g. 12345678-12345678.
